Abstract (en)

[origin: WO9802627A1] A process is disclosed for producing formwork elements for buildings or civil engineering works with a concrete casing. The starting material are already foamed styropor blocks with contours cut and/or milled by means of a profile cutting device and/or cutting mill using cutting wires, profile cutting and/or milling tools. The cutting wires of the profile cutting device and/or cutting mill are in particular used to cut the slots for receiving the connecting webs. The positive and negative raised patterns are milled and/or cut by means of a cutting mill or a hot cutting device.
