Abstract (en)  
The cavity which contains the coloured printing ink is closed at the sides by walls (7) which engage with the surface of the printing roller. The sidewalls have grooves (26) which connect with the inside of the cavity. The grooves are in the form of slits which pass through the sealing surfaces between side walls and roller. The slits run at a sharp angle to the inner faces and point inward taken in the direction of rotation of the roller (2). The front ends (36) of the side walls are bent outward to provide scrapers for the printing inks.

Abstract (de)  
Bei einer Kammerrakel eines mit einer Rasterwalze versehenen Farbwerkes einer Rotationsdruckmaschine besteht die Aufgabe darin, Festkörperreibung zwischen stirnseitigen Seitenbacken und Rasterwalze zu vermeiden. Erfindungsgemäß wird dies durch mit einer Vertiefung (27) versehenen Dichtfläche der Seitenbacken (7,8) der Kammerrakel, die mit einer Farbkammer (22) verbunden ist, erreicht. <IMAGE>
