Abstract (en)

[origin: EP0866017A1] The web of paper, metal foil, plastics foil etc. is wound onto or off a roll which is fixed to a bush (5). The bush rests on a hollow spindle (15) and the spindle and bush may rotate together. The hollow spindle has a series of holes, each with a number of spring-mounted locking pins (40) which extend outwards to engage with the bush when the hollow spindle cavity is pressurised. When the pressure is relaxed, the pins disengage from the bush.
