Abstract (en)

[origin: EP0866170A2] The structure is displaceably arranged in an accommodation (16) with a pre-located section (15) in firm ground (18). The rails (24) are located on supports displaceable longitudinally. The supports evolve from the accommodation (16) for the structural section. The supports are displaceably arranged in guide which are installed in side walls of the accommodation or evolve from them, along which the structural section (15) is displaceable. The supports are sleepers or sleeper type bodies, which engage on the face side in guide rails of the face walls, with the accommodation formed as a face and head-side open chamber.
