Abstract (en)
[origin: EP0866173A2] The grazing strip (1) has supporting equipment which lies to the rear, relative to the direction of travel. The supporting equipment and/or the regions of the profiled regions of the strip, are formed in one piece with the latter. The equipment has at least two parts which are separated from one another, and from the regions on the strip for the ploughshare fasteners. The profiled regions include the upper edge regions (13) of the strip, and/or a profile (2) which extends from these regions to the lower edge of the strip.
