Abstract (en)  
A substantially parallelepiped-shaped metallic structure for temporary architecture, comprising a first plurality of longitudinal structural support members (1) forming at least the apices and the outer sides of the structure, a second plurality of structural members (4, 5), each one of which placed between at least two members (1) of said plurality of structural support members (1) and a plurality of panel members (20, 21) made integral with said first and second plurality of structural members (1, 4, 5), characterized in that at least a portion of said first plurality of structural members (1) have a profile consisting of a substantially C-shaped cross section with at least two adjacent sides (2) having substantially same dimensions and with at least one of their end portions facing at least partially the inner side of the profile, and in that it further comprises fixing means (22, 23, 24) of said plurality of panel members (20, 21) on said first and second plurality of structural members (1, 4, 5), ground-based supporting means (6) of said metallic structure removably connected therein and, optionally, ground fixing means (7, 8, 9, 10, 11). <IMAGE>
