Abstract (en)

[origin: EP0866195A2] The long hole (6) in the wall console (1) is for anchoring to the wall (7) with the aid of anchoring bolts (3). A circular disc-shaped reducing plate (2) is provided with through round inner holes. The reducing plate has an upper circular disc area with an upper outer diameter which is smaller than the cross diameter of the long hole and a lower circular disc area with a lower outer diameter which is less than the cross diameter of the long hole. The transition from the upper to the lower circular disc area runs in a staged formation. The height of the lower circular disc area vertical to the disc surface is less than the thickness of the wall console (1) in the area of the long hole (6).
