Abstract (en)

[origin: EP0866197A2] The shelter comprises a single supporting post (1) and a cover (2) which is fixed to the post so that it is deployed to one side of it. The post is fixed to the ground by a base plate (4) and anchoring rods (5) or similar, and the cover is made from a material (6) stretched over a frame (7) with a horizontal adjustment and tensioning system and a central vertical support (8). The frame is joined to the support (8) by a vertical tube (10) which is connected in turn to the post by a supporting arm (9), and its tensioners are in the form of adjustable threaded couplings at the frame ends.
