Abstract (en)
A device for securing valuable documents comprises a closable volume with at least two spaces (7,9). A first space (7) is herein intended to receive the valuable documents, while in the second space (9) are arranged capsules (14) which contain a pyrotechnic mixture. The capsules will be ignited in the case of undesired handling of the device in order to generate a flame which as it were perforates the documents present in the first space.
