Abstract (en)

[origin: EP0866204A1] The system, for a cupboard with sliding roller shutter doors (2,3) with a lock (5) and catch (13) to hold them together. The lock and-or handles (6,7) are positioned to prevent any access to the catch, making it impossible for anyone to open the lock by sliding a blade between the edges of the doors and lifting the catch with it. The body of the lock containing the mechanism is positioned on the edge of one of the doors. The other has a recess to receive it, and each of the handles is shaped to fit round one side of the lock.
