Abstract (en)

[origin: EP0866281A2] A first spacer piece (10) is fixed to a building part and is joined to a second spacer piece (20) on which a pipe is placed. The two spacer pieces are fixed in a first direction set by the longitudinal direction of the joined spacer pieces. The distance between the two spacer pieces is adjustable. The connection is in the form of an elastic snap connection. A fastening preventing the connection from undoing consists of a collar or sleeve. The two spacer pieces have two couplings (14,22) each in the form of screws, rivets, snap connections or positive locks.
