Abstract (en)

The device monitors and controls elements of air-conditioning technology, especially fire protection flaps (1), air flaps, ventilation grilles, air outlets, etc. which are connected to a central office (3). It has at least one sensor for an end position - open or closed - assigned to the elements. Two Hall-effect end-switches are assigned to each element, whereby the one detects the open position of the element and the other, the closed position with preferably an intermediate position. Each Hall switch lies on a bus conductor which is wired in parallel. Each single Hall switch is addressed and the addressing takes place automatically.

Abstract (de)

Bei einer Vorrichtung zum Überwachen und Steuern von Elementen der Klimatechnik, insbesondere von Brandschutzklappen (1.1 - 1.4), Luftklappen, Lüftungsgitter, Luftauslässen usw., welche mit einer Zentralen (3) verbunden sind, soll dem Element (1.1 - 1.4) zumindest ein Sensor für eine Endlage (offen/geschlossen) zugeordnet sein. <IMAGE>
