Abstract (en)

[origin: EP0866363A1] In fast colour photographic material with red-sensitive (RS), green-sensitive (GS) and blue-sensitive (BS) silver halide (AgX) emulsion units containing cyan, magenta and yellow couplers respectively and optionally light-insensitive layer(s), the RS unit consists of NOTLESS 2 layers sensitised with sensitising dyes giving a sensitivity curve characterised by the following parameters : $635 \text{ nm} \leq \lambda (\text{Smax}) \leq 660 \text{ nm}$; $b_{80} \geq 35 \text{ nm}$; $b_{50} \geq 56 \text{ nm}$; $b_{20} \geq 96 \text{ nm}$; in which $\lambda (\text{Smax})$ = the wavelength of the sensitivity curve maximum (100% intensity); b_{80} , b_{50} , b_{20} = the width of the sensitivity curve at 80, 50 and 20% respectively of the maximum intensity.
