Abstract (en)

A fault current circuit breaker for high fault currents has at least one summation current transformer and a following evaluation circuit. There are actually two summation current transformers(11) provided, each with a ring core, and each evaluation circuit with a signal circuit(13). The signal circuits are set up for different high response levels and they control a single release mechanism (14). The response levels of the two signal circuits differ by a factor of between 5 and 15, actually a factor of 10. The first signal circuit is set up for about 300 mA and the second for about 30 mA. A separate summation current transformer is provided for the protective conductor.

Abstract (de)

Solche Fehlerstromschutzschalter haben wenigstens einen Summenstromwandler und eine nachgeschaltete Auswerteschaltung. Erfindungsgemäß sind zwei Summenstromwandler (11, 21, 31) mit je einem Ringkern und je einer Auswerteschaltung mit Signalkreis (13, 23, 33) vorhanden, wobei die Signalkreise (13, 23, 33) für unterschiedlich hohe Ansprechwerte ausgelegt sind und eine einzige Auslösemechanik (14, 24) ansteuern.
