Abstract (en)

[origin: EP0867541A1] To produce a twisted yarn, in a combined spinning/twisting process, at least two spinners (52,53) each deliver spun yarns (a,a') which are fed to a centering point on the axis of a two-for-one twister. They are twisted initially in one direction to pass to a second centering point to be given an opposed twist. They pass through the second centering point within a yarn balloon between the centering points to be wound on to a bobbin (22) which is rotated within the yarn balloon.
