Abstract (en)
[origin: EP0867657A2] The light housing (10) is narrower than the distance between the profile bars (21,22) and on the light housing is fixed at least one laterally extending support arm (26a,26b), which bridges over the distance of the light housing from the corresponding profile bar. The support arm is fixed to the profile bar. Support arms can extend to both sides from the light housing. They may only be fixed to face-side end pieces of the light housing. They can be components of a cross part which extends from one profile bar to the other. Each cross part may be fixed to an end piece of the light housing.
