Abstract (en)

[origin: EP0867679A2] Deep-drawn guide devices comprising two crossing shares form parallel ribs (15), the height of which corresponds to half the counter-sided spacing of the bases of the troughs. The bases of the troughs have parallel ribs (15). The parallel ribs of directly adjacent heat exchanger plates are provided either on the facing sides of the heat exchanger plates or on the sides turned away from each other and extend exclusively into the flow paths for one of the two media.
