Abstract (en)

[origin: WO9717871A1] The proposal is for an upholstery component with a cover over a core of elastic material, preferably a foam, which is secured to said core by a securing component surrounded by the core, in which the surface of the core (1) has a groove (4) which widens inwards, one edge of a strip of material (7) is fitted to the inside of the cover (2) and the opposite edge has a dimensionally stable body (3), said body (3) is inserted into the groove (4) and the maximum diameter of the body (3) is in the groove (4) and is greater than the minimum diameter of the groove (4), and a process for its production.
