Abstract (en)
[origin: DE19548303A1] The invention relates to a dry end for drying a material web, in particular a paper or cardboard web, having at least one drying group with a plurality of drying cylinders and web guiding rollers and at least one nozzle device for transporting the threading part of the material web along a winding path by means of at least one conveyor band. The dry end is characterised in that groups of at least two nozzle devices (17, 19, 21) located at the same side of the material web (11) follow each other in the direction of transport of the material web (11).
