Abstract (en)
[origin: EP0869068A1] At least two opposite side walls (6,7) of each container are formed stepped so that the container can be pushed into a second similar container at the side in the access opening area (5). The upper supporting edge (3) of the container can have longitudinal ribs (15,16) for supporting the lower edge (20) of a similar container. Each rib has a protruding nose (23) towards the access opening and with the back wall (13) fixes the lower edge of the similar container.
