Abstract (en)
[origin: EP0869232A1] Bracket assembly (1) to be fixed to a wall (2) or another part of a building structure to support a facade element to be mounted in front of said assembly. The bracket assembly (1) consists of two spaced plate sections which are connected to one another and which, on the one hand, are provided with means for fixing to the wall (2) and optional adjustment of the position with respect to the wall (2) and, on the other hand, are provided with seats (5) for accommodating a support member (11). The support member (11) functions to take a facade element and is provided with gripping means which interact with gripping means on the linking member constructed in such a way that the support member (11) can be fixed in an arbitrary longitudinal position with respect to the linking member.
