Abstract (en)

The mechanism comprises a sliding assembly (4) which moves lengthwise relative to a lock housing (3) and carries a bolt (40). It has an actuator (7) for moving the assembly away from the inner wall (17) of the door or window, and a barrel lock (46) operated by a key (45). The mechanism incorporates a drive (47) which moves lengthwise relative to the lock housing (3) and interacts with the barrel so that it can be moved in one direction or the other by rotating the key. The drive mechanism also has shaped surfaces (111) which interact with similar surfaces on the sliding assembly.

Abstract (fr)

La ferrure (101) comprend un organe d'entraînement (103) mobile dans la direction longitudinale (5) du boîtier (3) par rapport audit boîtier (3), et comportant, d'une part des moyens adaptés à coopérer avec des moyens complémentaires solidaires du barillet (46) pour permettre de déplacer ledit organe d'entraînement (103) dans un sens (13) ou dans l'autre au moyen de la clé (45), d'autre part des moyens adaptés à coopérer avec des moyens complémentaires de l'assemblage coulissant (4) pour permettre de déplacer ledit assemblage coulissant (4) au moyen de la clé (45).
