Abstract (en)
The lock mechanism (1) comprises an elongated housing (3) designed to fit into an aperture in the inner panel (5) of the door or window. It is equipped with a bolt holder (6) operated by an actuating member (8) so that it moves between locked and unlocked positions. The actuating member is able to pivot about an axle (11) passing across the housing from one side of the door or window aperture to the other. Both the actuating member and the bolt holder have interacting cam surfaces (13,14) to move the bolt holder horizontally as the actuating member is moved in or out of the lock housing.

Abstract (fr)
L'organe de manœuvre (8) est monté de façon pivotante autour d'un axe (11) traversant le boîtier (3) dans la direction transversale (12) de la lumière (4), et l'organe de manœuvre (8) et le porte-pêne (6) comportent, l'un (6), des moyens formant surface de came (13), l'autre (8) des moyens formant galet de came (14) adaptés à coopérer avec les moyens formant surface de came (13) de façon à permettre le coulisement du porte-pêne (6) dans un sens (15) ou dans l'autre (16), lorsque l'organe de manœuvre (8) pivote dans un sens (17) ou dans l'autre (18) autour de son axe (11).
