Abstract (en)
[origin: EP0869338A2] The dispensing container has a suction tube (48) within the container and supports (12,16) for orienting the container (10) in at least two preset positions. In the first position, the volume of the container under the tube is larger than in the second position. Alternatively, an inlet opening of the tube can be placed in at least two preset positions. In a first of these positions, the partial volume under the tube inlet is larger than in the second position. The container can be supported in the alternative positions by two support faces (12,16).
