Abstract (en)
[origin: DE19544916A1] The invention relates to baked products and a process for the production thereof. The traditional baking process is complemented by a smoking stage. A smoking process, for example directly after conventional baking is used to achieve a corresponding new flavour and also a surprising improvement in the life and the quality of the product after crisping, in particular for soft smoked baked products made from pastry dipped in a sodium hydroxide solution before baking.
