Abstract (en)

[origin: DE19521371A1] The aim is to develop a process by means for producing in the simplest possible way an enzyme-containing granulate suitable for incorporation in particulate cleaning agents which also contains anti-corrosion agents for silver, e.g. in the form of certain organic redox substances, in which said components, especially the enzyme, have a long shelf life. This has essentially been achieved by the preparation of a granulate containing an intimate mixture of the enzyme, an inorganic and/or organic vehicle therefor, and a silver corrosion inhibitor and possibly granulation auxiliaries. The enzyme granulates may be used to produce solid, especially particulate cleaning agents.
