Abstract (en)

[origin: WO9634082A1] The invention relates to a process for the preparation of a granular detergent composition or component having a bulk density greater than 650 g/l which comprises the step of dispersing a liquid binder throughout a powder stream in a high speed mixer to form granular agglomerates, wherein the powder stream comprises crystalline zeolite A having an oil absorbing capacity of at least 40 ml/100g, preferably at least 45 ml/100g and most preferably at least 50 ml/100g.
