Abstract (en)

[origin: DE19548122A1] The invention relates to DNA sequences, the use thereof and the use of DNA sequences of the MAG genes or high mobility group protein genes, agents for treating various disorders including tumour disorders, for influencing vascular development and for contraception and tissue regeneration, and to suitable kits and procedures. The specified sequences, agents, applications, kits and procedures allow a specific action on molecular mechanisms common to various disorders, vascular development, contraception and tissue regeneration. This reduces the drawbacks normally observed with agents and procedures of this type.
