Abstract (en)  
[origin: WO9641997A2] A gun lock assembly includes an engagement portion with a locked position in which a portion of the firing mechanism is operatively engaged to prevent firing of the firearm, and an unlocked position in which operation of the firearm is permitted. The lock preferably includes a lock housing with structure for attaching the lock housing to the firearm. An adaptor can be utilized to facilitate attachment of the lock to a variety of different guns. A preferred combination lock is disclosed with structure for altering the combination. An embodiment that is suitable for long arms is also disclosed. An adaptor plate can be provided with a lever which is moveable with operation of the lock to selectively engage a portion of the firearm to selectively permit or prevent operation of the firearm. Embodiments are disclosed where the lever is utilized to engage the drawbar of a firearm, the rebound slide of a firearm, or the hammer stirrup of the firearm.
