Abstract (en)
[origin: EP0870611A1] A method for the printing of packaging parts, and which comprises packaging parts 2 which constitute a part of a continuous web of foil 1, in that the individual packaging parts 2 lie at a distance from each other and are in connection with each other via the foil, whereby said continuous web of foil with the packaging parts is fed forward to a printing section B, where the printing of the packaging parts 2 in the printing section is effected with print-pads 10, and each printing cycle comprises a packaging part or several packaging parts lying parallel and at the side of each other with a distance between them, and where the printed packaging parts are then fed forward to a separation section D where the individual packaging parts are separated from the foil web by a separation process. There is hereby achieved a rational handling of the packaging parts with a minimum of working operations, in that the separation process is carried out after the printing of the packaging parts has taken place. <IMAGE>
