Abstract (en)

[origin: EP0870626A1] A manufacturing process of folders (10) used as document holders. The copyholder or fileholder folders (10) are made of recycled plastic material, whilst the bending areas (30) of the folder (10), obtained on the sides of the folder back (20), are manufactured through an extrusion phase followed by a calendering phase. In addition to the extrusion, two castings of soft plastic material are coextruded, inserted and amalgamated with the rigid plastic material to form two lines in order to ease the bending (30) of the folder (10) and to form two elastic hinges.
