Abstract (en)

[origin: EP0870667A2] The operating device consists of flap transmissions on both sides of the rail vehicle, one for each flap, e.g. upper and lower, with one drive for each flap. The flap transmission consists of four-link units (3,3') connected to the flaps. They are connected up both directly and via two-link units (6,6') which are in working connection with the drives (10,10') and are fixed to the main bearing (4).
