Abstract (en)

[origin: EP0870879A2] The frame has perforated profiled strips with fastenings to connect them. Each fastening has a shaft section (14) with a collar (5) and a slot (6) spaced from the collar and the end of the rod. The slot extends along the plane of the shaft to receive a wedge (7) having a thickness similar to the width of the slot. The collar diameter is greater than the diameter of the perforations. Two fastening shafts (4) can be connected together at their collar ends. The profile perforations can have regular spacings.
