Abstract (en)  
[origin: EP0870910A2] The exhaust gas cleaning device includes a casing (3) and at least one basically cylindrical exhaust gas cleaning body (1) with intermediate switching between bearing elements (2', 2''). The casing includes a tubular bearing sector and two transition cones (5) at the ends. It is divided into at least one plane running perpendicular to the longitudinal axis (7). The bearing sector is made conical, at least in some regions, widening towards the dividing plane. The annular cavity widens, at least in regions, towards the dividing plane.
