Abstract (en)
[origin: EP0870979A2] The lamp (1) has a base supporting a light source (6) and an associated rear reflector (5), which is adjustable relative to the light source via an adjustment device (4) for alternating the direction of the output beam. The angle between the reflector axis and the centre axis of the light source may be adjustable continuously by pivoting the reflector about an axis (17) transverse to the centre axis of the light source. The reflector may be further adjusted by movement parallel to the centre axis of the light source.
