Abstract (en)
[origin: EP0870982A2] The ceiling lamp (10) is fitted into an opening in the ceiling front surface (21) via a holder (11) supporting the light source, with a rotary locking wing (D) pivoted outwards after insertion of the lamp holder for locking behind the rear surface of the ceiling. The pivot bearing of the rotary locking wing fits around a threaded screw shaft (G), with an associated spring element (F) engaging the screw thread for axial movement along the screw, so that the locking wing is moved outwards as the screw is tightened.
