Abstract (en)

[origin: EP0871252A1] The connector includes a box (1) with rectangular shape and its transversal walls (4,5) presenting openings for the two cables which are to be connected. One of the openings (8) presents an elastic sleeve which covers the cable extremity. The other opening (9) has a U-shape and is parallel with a transversal partial wall (10) which forms a chicane. This prevents disconnection of the cable. The longitudinal wall (2) of the box has two reinforcements (2a,b) which define a recess housing a connection block. The box is covered by a lid.
