Abstract (en)

[origin: EP0871263A2] The arrangement includes an adapter having a current rail (1) with an isolated electrical current conductor (25). A housing (3) can be mounted on the current rail. Electrical contact elements (26) can contact the current conductor through openings (21) when the housing is mounted on the rail. The housing has two parts (4,5) which removably enclose the rail in the mounted state and which are linked together. The contact elements are mounted on only one of the housing parts on one side of the current rail.
