Abstract (en)  
[origin: WO9720540A1] A cosmetic composition in the form of a water-in-oil emulsion comprising: (a) discontinuous aqueous phase comprising an aqueous or hydroalcoholic solution of acidic skin care active; (b) continuous oil phase; and (c) pigment which has been coated with organosilicon component selected from a polyorganosiloxane and a silane, and mixtures thereof; characterised in that the aqueous phase has a pH of less than about 6 and the coated pigment has a hydrogen potential of less than about 2.0 ml H<sub>2</sub>/g of coated pigment. The compositions of the invention provide benefits in terms of reducing hydrogen gas generation and improving product stability.
