Abstract (en)
[origin: DE19546528A1] A fire extinguisher has a housing (10) in which is arranged an aerosol-generating unit (18) ignited by a fuse (24) by means of an igniting device (26). An inner sleeve (30) made of heat-insulating material is set into the metal housing (10). The inner sleeve is made for example of cardboard or another material that is carbonised when the unit (18) burns down, forming a heat-insulating layer on the inner wall of the housing (10). This reduces thermal stresses on the housing (10) and ensures a more regular combustion of the unit (18).
