Abstract (en)

[origin: WO9718951A2] The invention concerns an arrangement for turning and displacing a web (8) of continuous recording material, in particular a web of paper in an electrographic printer. The web (8) is fed along a first conveying path (30) out of a conveying direction (32) by a web-feeding device (34) and, after passing around a deflection device (40) disposed below the web-feed device (34) and after the latter, viewed in the conveying direction, is displaced via a web-discharge device (44) by at least one web width. The first edge (38) of the fed web (8) facing the web-discharge device (44) lies loosely on a first guide surface (42) of the deflection device (40). The invention further concerns a displacement arrangement which displaces the web (8) by one web width without turning it.
