Abstract (en)

[origin: DE19549115A1] The invention relates to a process for removing items from a cupboard, in which a given item is first selected and then removed from the cupboard. Information on the selected and removed items is recorded by means of a plug-in storage medium and also in the cupboard. The invention also relates to a cupboard for implementing the process having a device for storing items, apertures for their removal and locking devices for the apertures. There are recording devices on the cupboard for providing information on the items selected or removed, where such information can be displayed by a control device on a storage medium inserted into an aperture and in the cupboard.
