Abstract (en)

The machine frame (2) accommodates a plate (5) which in one plane is controllably pivotable around an axis (23). The axis is at the end of the plate and the drive device for activation of the pivot movement is effectively connected with the plate. An installation for permanent control is provided for the drive device. A shaft (6) is provided, which extends away from the lower surface (7) of the plate. The shaft is rotatably accommodated by the machine frame and is effectively connected to the drive device. Roller bearings (100, 101) are arranged on the shaft and are located in recesses of the machine frame. The drive device for carrying out the pivot movement is arranged on the machine frame in the form of a piston-cylinder unit and the piston is effectively connected with the plate.

Abstract (de)

Maschine (1) zum Biegen von Rohren und Stangenmaterial, mit einem Grundgestell (2) und einem Biegekopf (20) sowie einer Platte (5), die einen Wagen aufnimmt der mit einer Greiferzange (10) bestückt ist und zum Ergreifen der Endseite eines Werkstückes, das dem Biegekopf (20) gegenüberliegt dient, wobei eine Welle (6) vorgesehen ist, die sich von der unteren Fläche (7) der Platte (5) erstreckt und die Welle (6) drehbar im Grundgestell (2) der Maschine angeordnet ist, und die Welle (6) mit steuerbaren Antriebsmitteln wirkverbunden ist. <IMAGE>
