Abstract (en)

[origin: EP0872648A2] The device consists of an inner and an outer tube (11,12), and an expander unit (15) on the inner tube, to clamp it axially. The expander unit has a radially expandable element (16) with internal cone, and an internal element (17), which has a complementary outer cone and slides axially in the expander element. The device also has an axially directed adjusting screw (18). The screw is non-turnably held on the inner tube, it meshes with an internally threaded bore (21) in the internal element, and its end engages behind the internal element.
