Abstract (en)

Electrical assembly with a switch and an actuating device (103) comprising a bar (154) for positioning an operating lever of the switch, a motor (203) for moving the positioning bar (154) and a transmission device (206) for connecting the motor (203) to the positioning bar (154), in which the transmission device (206) during a closing operation connects the motor (203) to the positioning bar (154) so as to move the operating lever into a release position and then disengages the positioning bar (154) from the motor (203) in order to cause displacement of the positioning bar (154) by the operating lever. <IMAGE>
