Abstract (en)

[origin: WO9621675A2] The invention relates to the field of detection of pathogenic microorganisms in biological samples. More particularly, it relates to the use of complement components or fragments thereof, possibly bound to a solid phase, for capturing a wide range of microorganisms from a sample, said complement components being preferably C1 or C1Q or C3b; as well as to the same components for use in the preparation of a diagnostic device, agent or kit.
