Abstract (en)
[origin: DE19700615A1] A X-ray monochromator condenser arrangement to quasi-monochromatically illuminate an object (4) and generate a non-coherent image in an X-ray microscope (5) which has optical reflectors and a monochrome aperture blind (11) arranged on the optical axis (6) of the microscope (5), where the novelty is that the microscope has an off-axis zoneplate (7) and at least one plane mirror (2) which can be rotated about the optical axis (6). There is at least one plane mirror (2) arranged, either or both, before or after the zoneplate (7) in the X-ray beam (1).
