Abstract (en)  
The object of this invention are the improvements made in a life preserver device equipped with a launcher which affords the possibility of the immediate inflating of the float, controlling the distance to which the same is to be launched thanks to the means attached to the launcher, said means being a chart of metric notes (28) and a telemetric gauge (27), being attached to the float (1) and the launcher by means of a system of lines (21) and (23) which afford the possibility of joining the float to the roll stand (25) of the launcher, inside the muzzle (13) of which said float is inserted.
