Abstract (en)
[origin: EP0873939A1] Each pocket (23,24) of a folding-turret (21,22) has a slide-piece (28,29) or plunger (42,44) operating in the radially inner part of the pockets and temporarily acting as inner side of the pockets. The slide pieces or plungers of diametrically opposite pockets are joined and moved by a slide bar (30) or push rod moving longitudinally to and fro. During the rotary movement of the folding-turret, the slide pieces or plungers are displaced by a guide roll (94,95) or jockey roller (106) connected to the slide piece or plunger. The guide or jockey roller touches a curved path, especially a fixed guide groove (96).
