Abstract (en)

[origin: EP0874100A2] The diffusion sheet (1) forms a roof (D) under-lining. On one face (2) there is plastic reinforcement in the form of a spacer grid (G). This minimises contact area with the diffusion sheet. The spacing (A) is maintained by crossing sections (13) interconnected by bridging sections (14, 15). Longitudinal compressibility of the bridges (14, 15) is a novel and significant feature.
